

Psychology Faculty

Degree Course in Psychosocial Disciplines

The Degree Course

The degree course in Psychosocial Disciplines of the International Telematic University UNINETTUNO matches, in an innovative way, the scientific knowledge resulting from psychological research and cognitive neurosciences with the knowledge resulting from the heritage of humanistic and education sciences without neglecting the acquisition of professional-technical tools that are essential to enter the labour market. In this regards, the degree course favours the acquisition of theoretical knowledge and the development of professional skills that can be spent in many operational settings such as psycho-social consulting, psychometric assessment, human resources management, training and guidance, healthcare and welfare within public as well as private structures and also within companies and in third sector organisations. The course offers the opportunity to study more in depth fundamental issues of this discipline such as the study of intra-psychic structures and processes, the dynamics characterising human relations and the psycho-physiological mechanisms on which behaviour is based. The study of these issues is carried on integrating individual and team-work activities aimed at acquiring the theoretical foundations of general, social and development psychology and suitable operational skills, such as the psychosocial survey methodology, statistical methods and skills related to communication and information technologies. By means of the videoleasons of renowned national and international lecturers, supplemented by multimedia educational materials, exercises, virtual classrooms and other tools of analysis, more-in-depth study and assessment, along their study path, the students of the Faculty are constantly supported by tutors, researchers and area professors in a continuous and stimulating confrontation aimed at learning and personal development.

Study Programme

Degree Course in Psychosocial Disciplines

I YEAR

- Developmental Psychology
- Cognitive Psychology
- English Language
- Computer Science
